WORLD TALLOW TRADE AND PRODUCTION

Production

In 1973, world tallow production was down 2.7 percent from that of 1972 to 4.4 million metric tons. U.S. tallow production was down 5.4 percent to 2.4 million metric tons. Production in the other major producing countries was unchanged or up slightly.

In 1974, world beef production is expected to increase and world tallow production is expected to increase by over 5 percent to a new record.

Trade

World exports of tallow were down slightly during 1973. U.S. exports were down 2.3 percent to 1,014,100 metric tons, while Australian exports were up 29 percent to 279,800 metric tons. The United States and Australia accounted for 63 and 17 percent, respectively, of world trade in 1973.

U.S. exports to the developing countries of Asia, South Africa, and Africa fell, but increases were recorded to Western Europe and Japan. The United States is the most important supplier in the major importing markets except for the United Kingdom where the Commonwealth countries have had a trade advantage.

In 1973, Japanese imports increased 14.8 percent to 293,100 metric tons, and the U.S. share increased to 66 percent from 61 percent in 1972. U.S. exports to the European Community increased 35 percent. High world prices for competitive vegetable oils caused the sharp increase in U.S. tallow exports to the developed countries, while the lack of foreign exchange reduced exports to developing countries.

The average export value of U.S. tallow was 13 cents per pound in 1973, compared to 7 cents per pound in 1972. In the first 6 months of 1974, U.S. exports increased and export prices averaged 20 cents per pound. In 1974, world trade in tallow will be over the 1973 level because of continued high vegetable oil prices and increased tallow production. For 1975 and later years, world palm and coconut oil production is expected to increase, bringing pressure on tallow prices.
